CST1500 Computer Systems Architecture and Operating Systems

Online Session

Adam Philpot

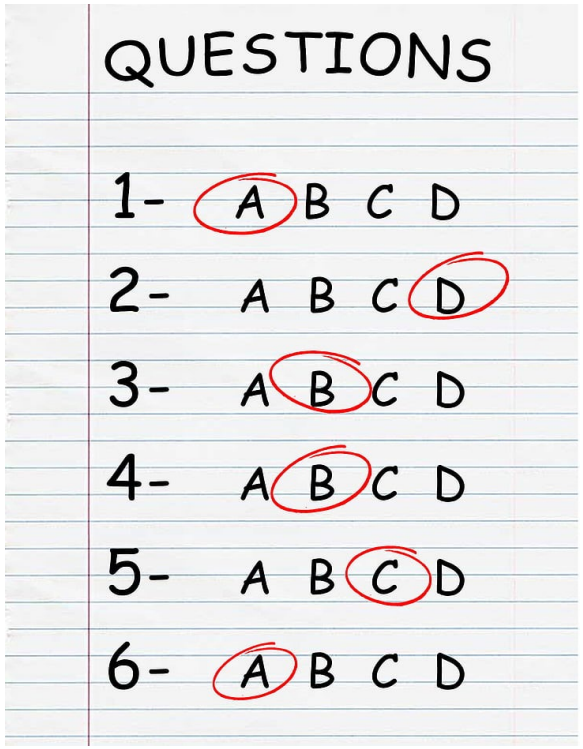
Announcement

- This Thursday’s Workshop will be with Ali Khoshkholghi.
- Batch Scripting.

Formative Test

- There will be a FORMATIVE test this week in the Lab which will cover lectures 1 - 6.
- Check the mock test in the Test 1 folder.
- You may take the test at home if you wish.
- Try to not look up the answers – the test is for your own benefit.

Formative Test



- The test will open at 9:00 am and close at 12 pm.
- 1 attempt.
- 30 questions - 30 minutes – Multiple Choice.
- Those registered with Disability and Dyslexia Support and who have a valid LSF/LSP issued by Middlesex University will have 10 minutes extra and use a separate link.
- The test will auto complete when 30 minutes have elapsed.

Announcement - LSF

- Email me if you have an LSF – Learning Support Form

a.philpot@mdx.ac.uk

- Attach the form

- In preparation for the Formative test.
- You may be eligible for extra time or other assistance.

Lecture Videos

- Week Four

- Lecture 08 Control Unit and Microprogramming
- Lecture 09 Computer Architecture 2

Coursework One - Clarification

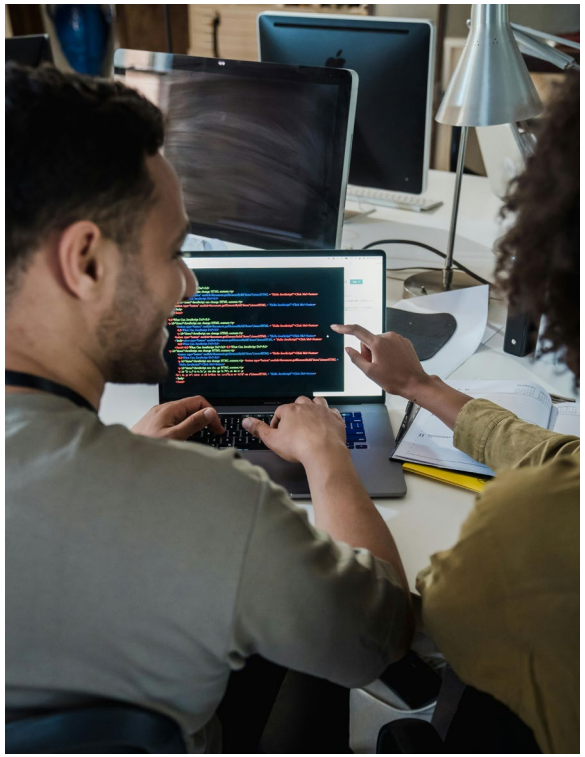
- Demo SOBs in the lab whenever you are ready.
- The sooner, the better!
- Lots of students want to show off what they've learned, so we are a lot more flexible now (than earlier in the course).
- DO NOT submit until you have completed all 10 SOBs (or all that you are able to).

Coursework One - Clarification

- If there are any SOBs that you have not demonstrated by the end of week 5, I will email you a time for the week 6 lab to demo any unchecked SOBs.

- Week 6 will strictly be for checking scheduled student’s SOBs.

- DON’T BE LATE



Coursework One - Clarification

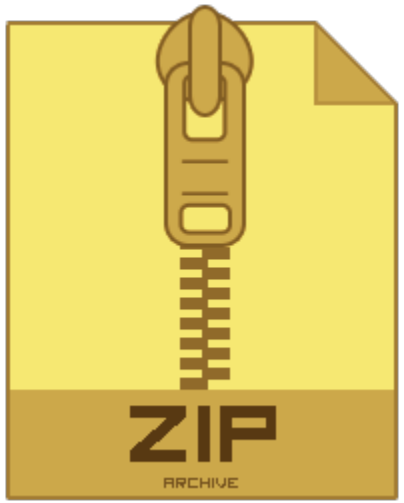
- If you did not demonstrate any number of SOBs by the end of the week 6 lab, you will need to make video demos of any outstanding SOBs.

- Every submitted SOB must be demonstrated for it to be considered – hence Student Observable Behaviour.

- LSF/LSP students will have an extra 5 days from the deadline to submit their work.

Coursework One - Clarification

- What to submit?
- ONE zipped folder which contains all SOB code, associated files and folders and any video demos.
- Code should have the correct extension.
- Files should be named according to the specifications.



Coursework One - Clarification

- Finally…
- Read the SOB specification VERY CAREFULLY!
- There are marks for following instructions.
- Important for study, work and life in general.
